CURASEPT WHITENING

WHITENING

EXTRINSIC TOOTH STAINING

There are a host of factors that may alter the natural white of teeth: food, drinks, pharmaceutical products, plaque, tartar, smoking etc. These superficial stains can be removed by using products containing highly effective active ingredients every day.

Curasept Whitening is an innovative line of **dental whitening products for home** use consisting of mouthwash, toothpaste and toothbrush.

Using the products **synergistically** makes the best use of the substances they contain, preserving the natural whiteness of the teeth and removing from the surface of the dental enamel:

- Tea, coffee, wine stains caused by the tannins contained in these drinks.
- Stains caused by eating certain coloured food (carrots, liquorice, beetroot).
- Stains caused by colourless substances such as smoke, chemical products for oral hygiene (chlorhexidine without ADS, stannous fluoride etc.).

ORAL RINSE

Curasept Whitening is an oral rinse for daily use. Recommended for those who, in addition to proper oral hygiene, want to maintain the natural whiteness of their teeth.

Carbamide Peroxide releases hydrogen peroxide which penetrates between the enamel prisms and acts effectively on tooth discolouration.

Phytic Acid protects the natural whiteness of teeth, by binding to calcium on tooth enamel and preventing plaque and pigment deposits.

Essential Oils offer important benefits for a complete protection.

They fight plaque and bad breath, do not irritate or burn oral mucous membranes, protect from caries, and keep gums healthy.

It does not contain Alcohol and SLS which can irritate the oral mucosa in predisposed subjects.

WARNINGS:

Do not swallow - For external use only - Keep out of the reach of children - Keep away from light and heat sources - Avoid contact with eyes - Dispose of the container properly after use - Contains Sodium Fluoride and Sodium Monofluorophosphate.

GEL TOOTHPASTE

It contains an innovative formula based on a chemical complex consisting of Polyvinylpyrrolidone and Oxygen called **Peroxydone**, which is effective against external enamel staining.

Micronized silicas act gently on the enamel and help remove surface stains without affecting the natural structure of the teeth.

The combination of two Fluorine Salts, **Sodium Fluoride** and **Sodium Monofluorophosphate**, carries out a re-mineralising action and increases the natural structural resistance to caries.

The combination of Fluoride Ions and **Nascent Oxygen** contributes to fighting the growth of plaque and keeping teeth and gums in a good condition.

It is indicated for daily use.

TOOTHBRUSH

Whitening toothbrush with dual technology bristles.

The **Calcium Carbonate** contained in the middle bristles contributes to the removal of plaque and extrinsic enamel stains.

The **Microrelief** makes the surface of the side bristles uneven, enhancing the cleaning and whitening action.
