ORAL HEALTH OVERALL HEALTH

ORAL HEALTH IS AN INTEGRAL PART OF OVERALL HEALTH

Taking good care of our oral health is essential to maintaining our overall health.

Halitosis, gum problems and cavities are the main disorders affecting the oral cavity, which are caused by a buildup of the bacterial biofilm of plaque. The mouth is not only a gateway for external agents that are harmful to health, but is also filled with plaque containing microorganisms, viruses and bacteria, which can trigger pathological processes also throughout the body.

Many studies show that there is a strong link between periodontal disease and the onset of cardiovascular disease, gastrointestinal tract disorders, autoimmune diseases and other risk factors.

AN INNOVATIVE FORMULA

Curasept Daycare PROTECTION BOOSTER promotes oral health by helping to fight plaque bacteria and viruses while protecting the mouth for up to 4 hours*.

Curasept Daycare is a booster for your oral hygiene, which prevents and fights halitosis, gum problems and cavities in the long run, thanks to its innovative formula containing the Cetylpyridinium Chloride – Hydroxyapatite (CPC-HAP patent pending) complex and a unique combination of Essential Oils and Cetylpyridinium Chloride (CPC).

- The patented **CPC-HAP** complex contained in the toothpastes forms a protective remineralising layer due to its affinity for tooth enamel and gradually releases CPC over the course of 4 hours*, offering long-lasting protection.

- CPC, which is found in mouthwashes, is an **antibacterial** that kills microorganisms in plaque, inhibiting their proliferation.

- **ESSENTIAL OILS** have a broad spectrum of action against plaque bacteria and therefore help to fight halitosis, prevent gum bleeding, and provide a long-lasting feeling of freshness and cleanliness.

- It does not contain alcohol or SLS and therefore does not cause a burning sensation, dry mouth and peeling/irritation of the mucous membrane.

TOOTHBRUSHES

The Curasept Daycare product line includes 4 toothbrushes: Hard, Medium, Soft and Junior. **Extremely effective in removing plaque.**

DAYCARE AND THE ENVIRONMENT

A special focus was placed on **respecting the environment by using recyclable or recycled raw materials.**

Aluminium tubes, PET bottles, paper cases, toothbrushes made from 96% recycled plastic and 100% bio-based polymer bristles show how highly effective oral hygiene can be offered while respecting the environment.

DIRECTIONS FOR USE

Brush your teeth after meals using a small amount of **toothpaste for at least 2 minutes.**

Rinse your mouth for at least **30 seconds with about 20 ml of mouthwash**, without diluting it.

WARNINGS

- External use – Do not swallow
- Keep out of reach of children
- Store away from light and heat
- With Sodium Fluoride (Adult Toothpaste 900 ppm; Junior Toothpaste 250 ppm; Adult Mouthwash 220 ppm; Junior Mouthwash 220 ppm).

* *Kalichem test for CPC-HAP complex contained in the toothpaste.*

**Herbal Invasion, Frozen Mint,
Fruit Sensation, Junior Bubble Gum.**
