

PRIMIDENTI GEL

FIRST DENTITION: can be very uncomfortable at times.

Teething process in babies starts around six to eight months of age and ends by the age of two to three years with the complete eruption of milk teeth. First teething is usually painless but can be accompanied by some discomfort in newborn babies and infants. When the tooth erupts and presses against the gum mucosa, a local inflammatory state can develop. In these cases, discomfort is recognised based on typical symptoms such as abundant salivation, swollen and reddened gums, behavioural changes, including agitation, crying, lack of appetite and sleep disorders. In some cases, generalised malaise, fever, abdominal pain and diarrhoea may also occur. It is important to provide immediate relief so that your baby can eat properly and maintain a regular sleep wake rhythm. Preferably use gentle products with natural ingredients and free of local anaesthetics, which may be too aggressive. Thanks to the synergistic action of plant extracts and Hyaluronic Acid, **Curasept Primi Denti Gel** helps provide rapid relief from gum pain and discomfort associated with teething while protecting the mucosa.

INDICATIONS:

It is recommended in the presence of the typical symptoms of first dentition such as gum swelling and redness, and excessive salivation.

INSTRUCTIONS FOR USE:

- Apply enough gel to cover the painful area using Curasept Gum Massager or your clean and dry fingers.
- Use as often as needed, preferably before sleep and after meals.
- Do not rinse the baby's mouth for at least one hour.

WARNINGS:

- For external use only- Do not swallow • Keep out of the reach children • Keep away from light and heat sources • Do not use in case of hypersensitivity or allergy to one or more components • Do not use the product after the expiry date or if the packaging is damaged.

FUNCTIONAL INGREDIENTS:

Calendula: the soothing, softening and hydrating properties resulting from its high resin content make it ideal for delicate and fragile mucous membranes.

Mallow: thanks to the beneficial properties it moisturises and soothes the affected area and gives the mucosae a healthy appearance.

Hyaluronic acid: its potent moisturising properties protect the mucosa.

Calcium Glycerophosphate: protects against the formation of plaque to preserve tooth enamel.

Ammonium glycyrrhizinate: extract of the liquorice plant that brings irritated mucosae instant relief.

Chondrus Crispus: the potent soothing and hydrating properties resulting from its high mucilages content allow mild oral hygiene.

INGREDIENTS:

Water, Xylitol, Glycerin, Hydroxyethylcellulose, Calendula Officinalis Flower Water, Malva Sylvestris Leaf Water, Sodium Hyaluronate, Calcium Glycerophosphate, Chondrus Crispus Extract, Ammonium Glycyrrhizate, Aroma, Sodium Benzoate, Potassium Sorbate, Citric Acid.
